

# Security Solutions

Approved Protection Systems

Since 1929

“The combination of an Intrusion Detection System, Video Surveillance and Access Control offers a complete solution for protecting people, assets and facilities”

## Integrated Systems

An Integrated System consolidates the management of all aspects of an organization's security systems. Approved Protection Systems can help your organization create a convergence between your physical security systems, such as video surveillance, card access, and intrusion detection systems, and your Information Technology (IT) systems. Integrating your security systems maximizes your investment, while minimizing your operational costs!

## Products

### Intrusion Detection Systems

The benefits of an Intrusion Detection System are immeasurable! An Intrusion Detection System will keep your employees and customers safe during business hours and your property and assets safe during after hours. Having a visible Intrusion Detection presence will in many cases, detect and delay intruders before they can even approach your building. Depending on your facility's specific needs, the following detection devices can be connected to your system:

**Perimeter Sensors • Magnetic Door Contacts • Mechanical Switches  
Glass Break Sensors • Interior Motion Sensors • Notification Devices**

### Video Surveillance

An outdoor area Video Surveillance system will enable you to capture high quality time-stamped images to identify persons and objects involved in an incident. Video surveillance cameras not only prevent and capture the threat from without, but also the threat from within. With a Video Surveillance system you can improve employee performance, and enhance productivity. It can discourage workplace violence, harassment, inappropriate employee behavior and poor customer service, as well as prevent employee theft. With the option for remote access either through your personal computer or smart phone, you will know what is happening at your facility at all times!

**IP Cameras • Analog Cameras • Network Video Recorders  
Digital Video Recorders • Video Management Systems • Monitors**

### Access Control

Access Control systems allow the free movement of authorized personnel while restricting unauthorized access - **who can go where and when!** Access Control systems protects property, staff, revenue and assets. **No more need for keys or changing locks**, and no need for a security guard. Approved Protection Systems provides a range of authentication method solutions - from a facility requiring basic access identification, to high security needs facilities requiring the most advanced biometric technology.

**Bar Code • Magstripe • Proximity • Proximity Keypad Combo • Wireless Locks • Door Hardware  
Multi-Technology Readers • Biometrics Readers • Digital Door Locks • Electronic Locking**
